

DANUR ISA PRABUTAMA

System Administrator, Software Engineer & DevOps Engineer

082331333221 | isaprabutama@gmail.com

SUMMARY

Informatics Engineering student with a comprehensive understanding in the fields of IT infrastructure and software development. Have practical experience in managing data center operations as well as implementing virtualization and cloud systems. Skilled in building efficient IT solutions by combining clean code principles and reliable network management to support business needs.

EDUCATION

Diploma in Teknik Informatika, 3.84/4.00

August 2023 - August 2026

Electronic Engineering Polytechnic Institute of Surabaya

- Participated in Network Concept and Administration Workshop
 - Participated in Cloud Computing Workshop
 - Joined the cybersecurity research group laboratory
 - Joined EEPIS BIDIKMISI ORGANIZATION (Head of Student Development Department)
 - Peddes Jilid XI (Conceptor)
 - Joined E-Code (Frontend Developer)
-

PROFESSIONAL EXPERIENCE

Data Center Operations - PT Cloud Hosting Indonesia (IDCloudHost)

July - December 2025

- Managed the physical server lifecycle, covering specification adjustments, rack mounting, structured cabling, and OS installation.
- Performed routine maintenance on corporate infrastructure services to ensure system stability and availability.
- Collaborated with the NSOC team to execute seamless service provisioning for end-users.
- Troubleshoot and resolved technical issues regarding service disruptions to minimize downtime.

Frontend Development Speaker – Tailwind CSS Workshop

March 2025

- Delivered a technical session on frontend development using Tailwind CSS.
- Introduced participants to utility-first CSS concepts and responsive UI design.
- Demonstrated how to build clean, modern, and reusable web interface components.
- Guided participants through practical examples of styling layouts, buttons, cards, and sections.
- Shared best practices for creating consistent and maintainable frontend design

Researcher, Developer - CSRG PENS

March 2025 - Present

- Network Monitoring Software (NMS) Development
- Implementation of network device monitoring system on Thingsboard platform

Computer Technician - Sidodadi Computer

January - April 2022

- Computer damage analysis
- Repair of computer hardware components
- Negotiating with customers

PROJECTS

Flutter Delivery Workflow Bug Fixing

- Diagnosed and resolved critical bugs in a Flutter-based delivery workflow, improving app stability and day-to-day operational reliability.
- Fixed Android back-navigation and routing issues across top-level pages, ensuring a more consistent user experience.
- Improved QR scanning flow by adding input normalization, duplicate prevention, and manual entry support.
- Enhanced Bluetooth thermal printing workflow with saved printer selection, better connection handling, and clearer user feedback.
- Implemented frontend safeguards against inconsistent backend API responses to prevent incorrect delivery item data from being shown to users.
- Refined UI elements such as printer settings, action flows, and status badges to improve usability and visual consistency.

Computer Network Simulation with various protocol combinations.

- Network Topology Design: Using Mikrotik as the main router, Palo Alto as the firewall, and various devices such as Cisco switches and servers.
- Palo Alto Firewall Configuration: Applying Access Control Policies (ACL), NAT, and traffic inspection between zones.
- Traffic Monitoring & Analysis

Deploying Private Cloud Infrastructure (OpenNebula)

- OpenNebula cluster deployment using KVM hypervisor for efficient resource management.
- Ceph distributed storage integration to ensure data redundancy and high availability.
- Failover configuration using Raft consensus algorithm for automatic leader selection.
- Infrastructure as Code (IaC) implementation with Terraform for automated VM provisioning.

Building enterprise network (Simulation)

- EtherChannel configuration to increase bandwidth between switches.
- OSPF implementation for efficient dynamic routing.
- VPN configuration for secure connections between sites.
- Optimize the network with STP to prevent loops.

SKILLS

- | | | | |
|-------------------------------------|--------------|------------|---------------|
| • Linux | • Proxmox | • Docker | • Programming |
| • Cloud Computing | • OpenNebula | • AWS | • Terraform |
| • Storage Management (Block/Object) | • Ceph | • Mikrotik | • Git |

CERTIFICATION

- **Alibaba Cloud Certified Developer** - ALIBABA CLOUD
- **CCNP Enterprise: Core Networking (Badge)** - CISCO
- **Network Addressing and Basic Troubleshooting** - CISCO
- **Physical, Data and Network Layers basics** - CISCO

ADDITIONAL INFORMATION

- **Language:** Indonesian, English
