

DANUR ISA PRABUTAMA

System Administrator | Software Engineer | DevOps Engineer

082331333221 | isaprabutama@gmail.com

PROFESSIONAL SUMMARY

Informatics Engineering student with practical experience in IT infrastructure, data center operations, virtualization, cloud systems, network monitoring, and software development. Skilled in Linux, Proxmox, OpenNebula, Ceph, Docker, AWS, MikroTik, Terraform, Git, and network administration. Able to combine reliable infrastructure management, clean code practices, and network monitoring concepts to build efficient IT solutions that support operational needs.

TECHNICAL SKILLS

Infrastructure & Systems: Linux, Cloud Computing, Proxmox, OpenNebula, Ceph, Docker, AWS, Storage Management (Block/Object)

Network & Security: MikroTik, Palo Alto Firewall, OSPF, VPN, STP, EtherChannel, NAT, ACL, Traffic Monitoring, Network Topology Design

DevOps & Development: Terraform, Git, Programming, ThingsBoard, Tailwind CSS, Flutter Workflow Debugging

PROFESSIONAL EXPERIENCE

Researcher, Developer | CSRG PENS | March 2025 - Present

- Developed Network Monitoring Software (NMS) focused on network device monitoring and operational visibility.
- Implemented network device monitoring on the ThingsBoard platform to support centralized monitoring workflows.
- Applied network monitoring concepts to support reliable telemetry collection and infrastructure observability.

Data Center Operations | PT Cloud Hosting Indonesia (IDCloudHost) | July 2025 - December 2025

- Managed the physical server lifecycle, including specification adjustments, rack mounting, structured cabling, and OS installation.
- Performed routine maintenance on corporate infrastructure services to support system stability and availability.
- Collaborated with the NSOC team to execute service provisioning for end users.
- Troubleshoot and resolved technical issues related to service disruptions to minimize downtime.
- Participated in the migration of company asset management from manual spreadsheet-based tracking to a web-based asset management system to improve asset data organization, accessibility, and monitoring.

Frontend Development Speaker | Tailwind CSS Workshop | March 2025

- Delivered a technical session on frontend development using Tailwind CSS.
- Introduced utility-first CSS concepts, responsive UI design, and reusable interface components.
- Guided participants through practical examples for styling layouts, buttons, cards, and sections.
- Shared best practices for creating consistent and maintainable frontend design.

Computer Technician | Sidodadi Computer | January 2022 - April 2022

- Analyzed computer hardware damage and identified repair requirements.
- Repaired computer hardware components and supported customer service communication.
- Negotiated with customers regarding repair needs and service options.

PROJECTS

Network Monitoring Platform | Go, ThingsBoard, MQTT, SNMP, ICMP, SQLite, Next.js

- Developed a distributed network monitoring platform for multi-site environments using local gateway agents, outbound MQTT communication, and centralized visualization through ThingsBoard.
- Implemented an agent-side telemetry pipeline to collect SNMP and ICMP metrics, preprocess raw network data, and generate operational metrics such as throughput and utilization.
- Built a Go Backend-for-Frontend and SQLite-based store-and-forward queue to support dashboard-ready monitoring data and improve telemetry reliability during connectivity issues.

Flutter Delivery Workflow Bug Fixing | Flutter, Android, QR Scanning, Bluetooth Printing

- Diagnosed and resolved critical bugs in a Flutter-based delivery workflow to improve application stability and operational reliability.
- Fixed Android back-navigation and routing issues across top-level pages to improve user experience consistency.
- Improved QR scanning flow by adding input normalization, duplicate prevention, and manual entry support.
- Enhanced Bluetooth thermal printing workflow with saved printer selection, improved connection handling, and clearer user feedback.
- Added frontend safeguards against inconsistent backend API responses to prevent incorrect delivery item data from being shown to users.

Private Cloud Infrastructure Deployment | OpenNebula, KVM, Ceph, Terraform

- Deployed an OpenNebula cluster using KVM hypervisor for efficient resource management.
- Integrated Ceph distributed storage to support data redundancy and high availability.
- Configured failover using the Raft consensus algorithm for automatic leader selection.
- Implemented Infrastructure as Code (IaC) with Terraform for automated VM provisioning.

Computer Network Simulation | MikroTik, Palo Alto, Cisco Switches, OSPF, VPN, STP

- Designed network topology using MikroTik as the main router, Palo Alto as the firewall, and Cisco switches and servers as supporting devices.
- Configured Palo Alto firewall policies, including ACL, NAT, traffic inspection, and inter-zone security controls.
- Implemented EtherChannel, OSPF, VPN, and STP to improve bandwidth, routing efficiency, secure site connectivity, and loop prevention.
- Performed traffic monitoring and analysis across simulated enterprise network scenarios.

Kanban-Based Task Management Application | Node.js, Next.js, Flutter

- Developed the frontend interface for a Kanban-based task management application using Next.js, focusing on task boards, task cards, and user-friendly workflow visualization.
- Contributed as an Assistant Scrum Master by supporting sprint planning, task tracking, team coordination, and progress monitoring during the development process.
- Integrated AI-assisted task generation features to help users automatically generate Kanban tasks based on project needs and improve task planning efficiency.

EDUCATION

Diploma in Teknik Informatika | Electronic Engineering Polytechnic Institute of Surabaya | August 2023 - August 2026

GPA: 3.58/4.00

Activities: CSRG laboratory, E-Code Frontend Developer, EEPIS Bidikmisi Organization - Head of Student Development Department, Peddes Jilid XI - Conceptor

Workshops: Network Concept and Administration Workshop, Cloud Computing Workshop

CERTIFICATIONS

- Alibaba Cloud Certified Developer - Alibaba Cloud
- CCNP Enterprise: Core Networking (Badge) - Cisco
- Network Addressing and Basic Troubleshooting - Cisco
- Physical, Data and Network Layers Basics - Cisco

ADDITIONAL INFORMATION

Languages: Indonesian, English
